Dear Commissioner Jane E. Henney,

I am an eleventh grader currently enrolled at Dakota High School. In my health class, we are learning about the costly downsides antibiotics have. This includes medically useful antibiotics.

This issue concerns me greatly since there is the possibility I or someone close to me could die. From the use of unnecessary dosage of antibiotics in animals, the bacteria they carry will become immune to the drug, and as a result, so will the bacteria in our bodies.

In closing, I am in complete support of the petition with the Food and Drug Administration asking that medically useful antibiotics be banned from animal feed. Doing this will save lives.

Thanks for your attention concerning this matter.

Sincerely,

Ann Chapman

As a member of the Center for Science in the Public Interest (CSPI), I urge you to save human lives by banning the use of medically useful antibiotics in animal feed. Adding antibiotics to feed in order to promote growth can make bacteria resistant to those antibiotics. And that can leave physicians with no way to treat life-threatening bacterial infections in humans. That's why I support the petition filed by CSPI.
